DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 6-16 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

"adapted" in claim 6 lacks positive recitation and should be deleted. This language is optional.

Same reasoning for Claims 10, 14.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by U.S. PG PUB 2003/0072395.

Re Claims 1, 6, 10, 14, 17, fig. 2 teaches BS 200, 210, 220 including an encoder 202, 212, 222 for encoding a plurality of signals in accordance to a predetermined scheme (negation scheme); further teaches a receiver 230 for receiving a combination

Art Unit: 2616

of the plurality of transmitted signals; further teaches for each antenna, interpolation is performed to obtain pilot information [0097 +], wherein the receive signal can be represented by a plurality of equations [0109 +]; further teaches the channel estimation (to determine a gain and phase shift) is performed for each receiver antenna [0133] by solving the plurality of equations.

Re Claims 2, 7, 11, 15, 18 refer to Claim 1, wherein channel estimation eliminates distortion in the received signals.

Re Claims 3, 4, 9, 13, 19, refer to Claim 1, wherein interpolation is performed in the even sub-carriers (tones) for the first transmitter and the also for the odd sub-carriers for the second transmitter (tone), wherein the band includes negative and positive frequencies.

Re Claim 5, refer to Claim 1, wherein the contents are different.

Re Claims 8, 12, 16, 20, refer to Claim 6, wherein the scheme inherently must be known to the receiver to decode the data.
